Feature: Accounts and role-based permissions

US-01: As a student, I would like to be able to create and log in to my account where all my reservations, submissions, and reviews will be kept private and where only I can access them when I log in to my account.

Completed when: I am able to register, log in, and access only my own data.

US-02: As an administrator, I need to assign the following roles learner, tutor, coordinator, and administrator for accounts where people can perform actions that are relevant to their roles.

Completed when: A student is not able to access coordinator or administrator pages.

Feature: Tutor profiles

US-03: As a peer tutor, I need to build a profile which contains my experience and all the subjects and topics I can cover, so that the students can know what I can offer to help them in.

Completed when: My profile is saved and visible to the students.

US-04: As a coordinator, I should be able to accept or reject a tutor's profile, in order for only the approved tutors to be displayed to the students.

Completed when: An "accepted" status is displayed for accepted ones while rejected tutors are concealed from the search.

Feature: Search

US-05: As a student, it is important for me to be able to search for tutors and sessions based on the subject and topic that I have difficulty in so I can receive the right help.

Completed when: Searching for "UML sequence diagrams" yields matching tutors and sessions.

US-06: As a student, I want the ability to narrow down the session options by format, timing, and group size as it will make it easier for me to choose the session that fits my schedule.

Completed when: Filters effectively narrow down the results.

Feature: Creating individual and group sessions

US-07: As a peer tutor, I want to organize a tutoring session where there are clearly outlined objectives, time and capacity in order for the students to know the topics that will be discussed and the number of people that are able to join.

Completed when: The session has objectives, time and capacity details displayed.

US-08: As a peer tutor, I want to add the location or a link to the meeting to access the session, to help the students know where to come or how to join.

Completed when: The student who is scheduled can see the location or link.

Features: Booking, Canceling, Attendance and Reminders

US-09: As a student, I would like to have the option to reserve a seat in a class, and if there are changes in my schedule, be able to withdraw from the booking in order to free up the space for others and have control over my schedule.

Completed when: The booking includes me to student register and cancelling frees up the space by removing me.

US-10: As a peer tutor, I would like to keep track of who attended each of the sessions and for them to be reminded prior to the session, so I could track attendance and minimize the number of people that miss their sessions.

Completed when: When I can keep track of attendance and reminders are sent prior to the session.

Feature: Session workspaces

US-11: As a peer tutor, I want to upload learning materials and make announcements in the session workspace so that the students will have everything in one place.

Completed when: Booked students can access my learning materials and announcements.

US-12: As a student, I would like to post my queries and study materials in the session workspace, so that before I meet with the tutor, he knows exactly what I need assistance in.

Completed when: My questions are visible to the tutor.

Feature: Practice submissions, tutor comments, history and feedback

US-13: As a student, I need to be able to submit my practice material and get feedback from my tutor in order to know where I have done good and where I need improvement.

Completed when: I am able to upload my material and get the feedback of my tutor.

US-14: As a student, I want to see my session history and give my feedback on the sessions I have attended, in order to help me measure my development and improve the service.

Completed when: Session history is shown and feedback can be provided for them.

Advanced Feature: Tutor Coordination and Service Quality

US-15: As a coordinator, I want to be able to view applications from potential tutors, approve their subjects, and view a report on any repeated no shows in order for me to ensure that the tutoring service stays reliable.

Completed when: I am able to approve or reject applications, as well as have a list of tutors with repeated missed sessions.

US-16: As a student, I would like to provide feedback only after participating in a session, and as a coordinator, I would like complaints and my decisions to be documented, so that feedback is reliable and every decision is traceable.

Completed when: Non-participants do not have the opportunity to provide feedback, and there is a history of decisions for every complaint.

Advanced Feature: Demand and Session Insights

US-17: As a coordinator, I want to have a dashboard that will show unmet demand, length of waiting list, attendance, and availability of tutors for each subject, so that I can determine where the students require more assistance.

Completed when: The dashboard shows the four above factors for each subject.

US-18: As a coordinator, I want the system to provide additional sessions when there is demand beyond a certain threshold, and whether or not the suggestion was implemented by me should be noted, so that popular subjects do not leave students in the waiting lists.

Completed when: The threshold has been crossed, a suggestion appears and its status (pending, accepted, ignored) has been noted.
